Patent No. 7022828
Patent No. 7022828
Patent No. 7022828
PAPLICANT: RLBozyme Pharmaceuticals, Inc.
PAPLICANT: McSwiggen, James
TITLE OF INVENTION: Enzymatic Nucleic Acid Treatment of Diseases or Conditions Relate
TITLE OF INVENTION: Levels of IKK-Gamma and PKR
FILE ACID INVENTION UNMBER: US/10/156,306B
CURRENT APPLICATION NUMBER: US/10/156,306B
CURRENT FILING DATE: 2002-05-28
NUMBER OF SEQ ID NOS: 8014
SOFTWARE: PatentIn version 3.0
SEQ ID NO 5820
LENGTH: 17
TYPE: RNA
ORGANISM: Homo sapiens

(NEST ) NESTEC SA. Hannah

The present invention relates to degenerative joint diseases, such as osteoarthritis and new compositions, devices and methods based on unique profiles of gene expression associated with osteoarthritis. Specifically claimed is a combination (A) comprising polynucleotide molecules (I), where (I) are differentially expressed in an osteoarthritic or in a pressteoarthritic subject compared to expression in subjects which are not osteoarthritic or pre-osteoarthritic. Also given is a method of detecting (M1) differential expression of nucleic acids in a sample; detecting (M2) Polymucleotides differentially expressed in canine osteoarthritis, useful in diagnosing and prognosticating osteoarthritis in mammals, and in identifying compounds useful for treating the disease. Example 5; SEQ ID NO 1578; 170pp; English.

                                                                                                                                     protein 13.31. The protein can be expressed by standard DNA recombination. The Parkinson syndrome associated protein 13.31 and encoding polynucleotides are useful for treating diseases such as cerebral cortex function disorder. The present sequence represents the human Parkinson syndrome associated protein 13.31 cDNA isolating RT-PCR
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       expressed in osteoarthritis, diagnosing or prognosticating (M4) osteoarthritis by measuring the production of transcription or translation products of one or more genes comprising any of SEQ ID NOs 1-1558 in a sample from the subject; a kit for detecting osteoarthritis by oligonucleotides of at least 10 consecutive bases comprising any of SEQ ID NOs 1-1558 or their fragments, and modulating (M5) osteoarthritis-arthritis associated gene expression in a cell by administering a compound that affects the expression of at least one gene comprising a sequence selected from SEQ ID NOs 1-1588. In M5 the compound is a vitamin preferably 1 alpha, 25-dihydroxy vitamin procession of the compound control succession of the compound compound that affects the expression of at least one gene comprising a sequence selected from SEQ ID NOs 1-1588. In M5 the compound is a vitamin procession of the compound com
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                D3), mineral, neutraceutical, small molecule pharmaceutical, protein, polypeptide, nucleic acid, fatty acid (preferably eicosapentaenoic acid or arachidonic acid) or polysaccharide (glucosamine or chondroitin
                                                                                                                                                                                                                                                                                                                          The invention relates to a novel human Parkinson syndrome associated protein 13.31. The protein can be expressed by standard DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Polypeptide-human Parkinson syndrome associated protein 13.31 and polynucleotide encoding it.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          14-JUN-2000; 2000CN-00116476
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               26-DEC-2001.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   and producing a DNA fragment. The current sequence is that of a PCR primer of the invention which is related to microorganism
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to a novel method for preparing a DNA fragment from a microorganism transformation. The method comprises preparing DNA units which have a structure enabling them to connect DNA fragments for homologous recombination, connecting these DNA units with a DNA fragment
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Preparing DNA fragment from microorganism transformation, by preparing DNA units which have structure for connecting DNA fragment for homology cecombination, connecting DNA units with DNA fragment, and producing Directions of the connecting DNA units with DNA fragment, and producing Directions of the connecting DNA units with DNA fragment, and producing DNA units with DNA fragment for homology DNA units with DNA fragment for homology DNA units with DNA fragment, and producing DNA units with DNA fragment for homology DNA units with DNA units with DNA fragment for homology DNA units with DNA fragment for homology DNA units with D
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             19-SEP-2002; 2002JP-00273747

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to genetically modified non-human animal comprising CC modification in at least one allele of endogenous reduced folate carrier CC (rfc) gene in the animal, where genetic modification results in reduction in endogenous RFC expression or biological activity in animal. The non-CC in endogenous RFC expression or biological activity in animal. The non-CC human animal optionally is further modified by introduction into genome, CC a nucleic acid sequence encoding biologically active human RFC. The CC compounds for treating cancer, for studying the molecular and biochemical CC events associated with folate transport and for identifying compounds CC useful for treating conditions associated with defective folate CC transport. Furthermore, a compound which binds to RFC with a higher CC transport. Furthermore, a compound which binds to RFC with a higher CC treating a neural tube defect, Parkinson's disease, Alzheimer's disease, CC cardiovascular disease, stroke, cleft palate. In the genetically modified CC animal, expression level of human rfc can be varied, as desired, to compound end of the present CC sequence is a PCR primer used in production of heterozygous mutant RFC compounds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         marker within BAC CIT-B-470f8 on 19q14.3. PCR was performed on genomic CC DNA from 15 early-stage and 18 late-stage ovarian tumours of different histologies. LOH analysis was performed to identify potential candidate tumour suppressor genes involved in ovarian carcinogenesis. The invention CC chromosome X (PAPX) ADR46296 is down-regulated in cancer cells. Claimed methods for killing a tumour cell comprise administering to the tumour cell a nucleic acid that encodes a Bex4 polypeptide, a vector comprising the nucleic acid, or a Bex4 polypeptide. The tumour cell can ovarian, cervical, brain, breast, prostate and hepatic tumour cells in a sample indicates a predisposition of an individual to develop cancer. A CC sample indicates a predisposition of an individual to develop cancer. A CC claimed method for detecting cancer recurrence in an individual diagnosed with and treated for cancer comprises measuring the level of bex4 gene methylation. The presence of hypermethylation indicates recurrence. The

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     pulmonary embolism. Single nucleotide polymorphisms (SNPs) are also useful in forensics, paternity testing, genetic analysis and phenotype correlations to diseases. The present sequence is an example of one of the human gene SNPS shown in the specification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            genes. The sequences at a number of polymorphic sites are also provided in the specification. In particular, the method can be used in the diagnosis of atherosclerosis, mycoardial infarction, coronary heart disease, stroke, peripheral vascular diseases, venous thromboembolism and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Nucleic acids comprising single nucleotide polymorphisms, useful in applications such as forensics, paternity testing, medicine, genetic analysis and phenotype correlations to diseases such as diabetes and

                                                                                                                                              밁
                                                                                                                                                                      cc diabetes, or a disorder related to cell signal processing and metabolic cc pathway modulation. The GPCR polypeptide and nucleic acid are also useful cf or diagnosting the presence of or predisposition to a disease associated co with altered levels of GPCR, particularly cancer. The GPCR nucleic acid are also useful cand polypeptide are especially useful in therapeutic or prophylactic applications for disorders associated with aberrant GPCR expression or activity. The DNA encoding the protein is useful in gene therapy for treating the above conditions. Furthermore, the nucleic acids and colypeptides are useful in treating adenocarcinoma, lymphoma, prostate cancer, uterus cancer, immune response, neurodegenerative disorders, casthma, inflammatory disorders, Crohn's disease, multiple sclerosis or Albright hereditary osteodystrophy. These are also useful in developing a cowerful assay system for functional analysis of various human disorders, cas well as in diagnostic applications. ABS58747-ABS59231 represent human cases of GPCR coding sequences, primers and probes of the invention
                                                                       Matches
                                                                                           Best
                                                                                                         Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to novel isolated G-protein coupled receptor (GPCR) polypeptides and polynucleotides. The GPCR polypeptide, GPCR nucleic acid and antibody are useful for treating, preventing or alleviating a GPCR-associated disorder or a pathological state in a subject, particularly a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New G protein coupled receptor polypeptides and polynucleotides, useful in gene therapy, particularly for treating or preventing cardiomyopathy, atherosclerosis, diabetes, multiple sclerosis, Crohn's disease or cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Li L, Ballinger RA, Pa

CC (GPCRX) proteins given in ABB1440 to ABB81458. GPCRX proteins can have (GPCRX) proteins given in ABB81440 to ABB81458. GPCRX proteins can have cc antiatherosclerotic, anorectic, antibacterial, fungicide, protozoacide, cv inucide, analgesic, cytostatic, immunomodulator, metabolic, hypotensive, cc antiasthmatic, antiparkinsonian, hypertensive, osteopathic, anti-HIV, cc antiinflammatory, antiinferrility, neuroprotective, antianginal, cc antidepressant, antimanic, anticonvulsant, haemostatic, hepacotropic, cc fumunosuppressive, cerebroprotective, dermatological, antiaddictive, cc enhypotropic and gynaecological activities, and can be used in vaccines complete therapy. GPCRX proteins and polynucleotides can be used for creating or preventing a GPCRX-associated disorder such as creating or preventing a GPCRX-associated disorder related to cell signal cc and polynucleotides can also be used in the manufacture of a medicament for preventing or treating disorders or syndromes including developmental disorders, cardiomyopathy, atherosclerosis, cancer, neurodegenerative cd absorders, autoimmune disorders, infectious diseases and diabetes.

autoimmune disorders, in

The invention relates to a novel isolated G-protein coupled receptor X (GPCRX) polypeptide. The isolated protein, its encoding polynucleotide and the antibody of the isolated protein is useful for treating or preventing a GPCRX-associated disorder in a subject, preferably human, where the disorder is cardiomyopathy, atherosclerosis or diabetes. The isolated protein, its encoding polynucleotide and the antibody of the isolated protein is useful for treating or preventing metabolic disorders, diabetes, obesity, infectious disease, anorexia,

The CC disorders also include cardiomyopathy, atherosclerosis, hypertension, CC congenital heart defects, aortic stenosis, subaortic stenosis, transplantation, adrenoleukodystrophy, congenital adrenal hyperplasia, CC prostate cancer, neoplasm, adenocarcinoma, lymphoma, uterus cancer, CC fertility, haemophilia, hypercoagulation, idiopathic thrombocytopenic purpura, immunodeficiencies, graft versus host disease, AIDS, bronchial CC asthma, Crohm's disease, and multiple sclerosis. The isolated protein, CC its encoding polymucleotide and the antibody of the isolated protein is CC useful in screening assays, detection assays (e.g., chromosomal mapping, CC tissue typing, forensic biology). The isolated protein, to detect GPCRX mRNA or a genetic lesion in a GPCRX gene, and to modulate GPCRX activity. The CC cell of the invention is useful for producing non-human transgenic CC animals. This polymucleotide sequence represents a reverse PCR primer of CC a GPCRX protein of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ঠ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Query Match

The proteins and coding sequences are useful for preventing treating disorders or syndromes e.g. atherosclerosis, hypertension, obesity or cancer. The present sequence was used in an example from the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          CC sample, comprising a central controller programmed to exchange and exchange information about the biological sample with an outside system or CC database and exchange information about the biological sample with one or CC more modules of the system, a sample transfer module for transferring a portion of the sample to a first container, a nucleic acid extraction CC module for extracting nucleic acids from cells within the portion and for transferring the portion from the first container to a second container, CC a nucleic acid measurement module for measuring the concentration of CC nucleic acids in the portion, a PCR preparation module for adding PCR CC reaction materials to the portion, a thermocycling module for amplifying CC a target sequence and extending a primer in the portion, a primer CC extension preparation module for adding primer extension reaction CC materials to the portion, a mass spectrometry preparation module for removing a sample of the portion from the second container to a support CC or analysis by mass spectrometry and a mass spectrometry module for analyzing the sample. The invention also relates to an automated method CC analyzing the sample. The virus is a virus of the family Herpesviridae, CC preferably Cytomegalovirus (CMV). The sample. The pathogen is a virus, batterium or fungus. The virus is a virus of the family Herpesviridae, CC preferably Cytomegalovirus (CMV). The system enables high accurate assays on nucleic acid sequences (e.g. clinically relevant nucleic acid cetection extension primer used in the scope of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Matches

materials to the portion, a mass spectrometry preparation module for removing a sample of the portion from the second container to a support for analysis by mass spectrometry and a mass spectrometry module for analyzing the sample. The invention also relates to an automated method for detecting mutations in a target gene. The diagnostic assay is an assay for detecting a pathogen in the sample. The pathogen is a virus, bacterium or fungus. The virus is a virus of the family Herpesviridae, preferably Cytomegalovirus (CMV). The system enables high accurate assays on nucleic acid sequences (e.g. clinically relevant nucleic acid.
                                                                                                                                                                                                                                                                                                                                                             more modules of the Bystem, a sample transfer module for transferring a portion of the sample to a first container, a nucleic acid extraction module for extracting nucleic acids from cells within the portion and for transferring the portion from the first container to a second container, a nucleic acid measurement module for measuring the concentration of nucleic acid in the portion, a PCR preparation module for adding PCR reaction materials to the portion, a thermocycling module for amplifying a target sequence and extending a primer in the portion, a primer extension preparation module for adding primer extension reaction
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           sample, comprising a central controller programmed to exchange information about the biological sample with an outside system or database and exchange information about the biological sample with

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention comprises DNA sequences which are associated with intestinal epithelium and peyer's patch M cells. The DNA sequences of the invention are useful for assessing, modifying, modulating or regulating intestinal epithelium or M cell development. The DNA sequences of the disease, glutenenteropathy, infectious diseases, autoimmune diseases (e.g. haemolytic anaemia, rheumatoid arthritis, dermatitis, Grave's disease, multiple sclerosis, allergy, asthma and diabetic mellitus), anaphylaxis, and blood group incompatibility. The present DNA sequence represents a PCR primer that was used to amplify an intestinal epithelium/peyer's patch M cell-associated DNA sequence of the invention
                                                                                             Pharmaceutical composition comprising an agent capable of modulating expression level or protein activity of a gene, e.g. ABCC4, or a T constituted by the polypeptide or antibody, and a carrier, useful for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Novel isolated or purified polypeptide encoded by genes associated with intestinal epithelium or M cell development, differentiation or function, useful for treating autoimmune diseases and infectious diseases.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     (b) a carrier. The pharmaceutical composition may also comprise a polynucleotide capable of inhibiting or decreasing the expression of the CRTP by RNA interference or an antisense mechanism. The CRTPs of the invention are selected from ABCC4, C20orf103, CACNAID, CDH6, CST, ENPP3, FLJ11856, GPR54, HAVCR1, SLC6A3, SLC3DA4, TRG, and TRPM4. The pharmaceutical composition is useful for treating cancer, e.g. colon cancer, lung cancer, breast cancer, prostate cancer, liver cancer, kidney cancer, stomach cancer, and esophageal cancer. The present sequence is a target oligonucleotide from one such CRTP for which short interfering RNAs (siRNA) were produced. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in
                        The present invention relates to a novel pharmaceutical composition comprising: (a) an agent capable of modulating an expression level or protein activity of a cancer related transmembrane protein (CRTP) or gene; an antibody specific for a CRTP, or a T cell activated by a CRTP; and (b) a carrier. The pharmaceutical composition may also comprise a polynucleotide capable of inhibiting or decreasing the expression of the CRTP by RNA interference or an antisense mechanism. The CRTPs of the invention are selected from ABCC4, C20orf103, CACNAID, CDH6, CST, ENPP3, FLJ11856, GPR54, HAVCR1, SLC6A3, SLC30A4, TRG, and TRPM4. The pharmaceutical composition is useful for treating cancer, e.g. colon
                                                                                                                                                                                                                                                                                                                                                                                                                                                Pharmaceutical composition comprising an agent capable of modulating an expression level or protein activity of a gene, e.g. ABCC4, or a T cell activated by the polypeptide or antibody, and a carrier, useful for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Synthetic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   24-MAR-2005
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ACL46980
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 21
                                                                                                                                                                                                                                                                                                                                                                Claim 3;
                                                                                                                                                                                                                                                                                                                                                                                                                    treating

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       និនិនិនិ≷&
                                      The present invention relates to a novel pharmaceutical composition comprising: (a) an agent capable of modulating an expression level or protein activity of a cancer-related transmembrane protein (CRTP) or gene protein activity of a cancer related transmembrane protein (CRTP) or gene (C) an antibody specific for a CRTP, or a T cell activated by a CRTP; and (C) a carrier. The pharmaceutical composition may also comprise a composition may also comprise a composition protein composition may also comprise a composition protein composition may also comprise a composition of the cRTP by RNA interference or an antisense mechanism. The CRTPs of the craft of cancer, breast cancer, prostate cancer, liver cancer, kidney craft for the short interfering RNAs (siRNA) oligonucleotide. Note: The sequence craft cate or this patent did not form part of the printed specification, but created on electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Matches

                                                                                                                                                                                                                                                The present invention relates to a novel pharmaceutical composition comprising: (a) an agent capable of modulating an expression level or protein activity of a cancer-related transmembrane protein (CRTP) or gene; an antibody specific for a CRTP, or a T cell activated by a CRTP; and (b) a carrier. The pharmaceutical composition may also comprise a polynucleotide capable of inhibiting or decreasing the expression of the CRTP by RNA interference or an antisense mechanism. The CRTPs of the invention are selected from ABCC4, C20orf103, CACNAID, CDH6, CST, ENPP3, FLJ11856, GPR54, HAVCR1, SLC6A3, SLC3OA4, TRG, and TRPM4. The pharmaceutical composition is useful for treating cancer, e.g. colon pharmaceutical composition is useful for treating cancer.
                                                                                                                                                                                        cancer, lung cancer, breast cancer, prostate cancer, liver cancer, kidney cancer, stomach cancer, and esophageal cancer. The present sequence is a target oligonucleotide from one such CRTP for which short interfering RNAs (sirNA) were produced. Note: The sequence data for this patent did
                                                                                                                                                                                                                                                                                                                                                                                                                                                             Pharmaceutical composition comprising an agent capable of modulating an expression level or protein activity of a gene, e.g. ABCC4, or a T cell activated by the polypeptide or antibody, and a carrier, useful for
                                                                                                                  Sequence

                                                                                                                                                                                                                                                                                                                 The invention relates to a nucleic acid molecule comprising at least one base variation from human cytochrome P450 (CYP) 3A4 or CYP3A5 sequence. Nucleic acid molecules of the invention are useful for identifying polymorphisms associated with CYP3A4, CYP3A5 or glutathione S-transferase (GST) M1 substrates which influence breast cancer treatments. They are also useful in diagnostic purposes to identify individuals having a polymorphic genotype which influence the outcome of breast cancer treatments and the selection of chemotherapeutic agents used to treat breast cancer. The polymorphisms detected are used to screen altered metabolism of CYP3A4, CYP3A5 or GSTM1 substrates, potential drug-drug interactions, drug adverse effects, likelihood of successful clinical outcome following treatment with anti-cancer agents such as cisplatin, cyclophosphamide and/or BCNU. The present sequence is human promoter -147
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New nucleic acid molecule useful for identifying polymorphisms associated with CYP3A4, CYP3A5 or GSTM1 substrates which influence breast cancer treatments, comprises at least one base variation from human CYP3A4 or

Also described are: a vector (II) comprising (I); a cell (III) comprising (II); a tripotent cell comprising (II); and increasing (M1) an expression of a DNA, comprising integrating beta actin promoter to the upstream of the DNA, where the promoter is obtained from a host cell, in which the DNA exist. (II) is useful for expressing a DNA in a host cell such as mammalian cell e.g. rodent cell. (III) is useful for producing protein which involves culturing (III) in a culture medium and recovering protein e.g. antibody or treating ADS or cancer. (I) enables to produce large quantities of protein e.g. antibody. This sequence represents a DNA construct associated primer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         anti-HIV; cytostatic; vaccine; expression; cell culture;

                                                                                 New isolated Toxoplasma gondii nucleic acids used, infection caused by this microorganism.
                                                                                                                                                                                                                                                                                                                            Immunogenic protein; Toxoplasma gondii protein; oocyst shedding; T. gondii infection; enteric apicomplexa oocyst; Cryptosporidium Toxoplasma oocyst; RT-PCR primer; 88.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention relates to an antisense oligonucleotide, targeted to a nucleic acid molecule encoding human steroid receptor coactivator-3 (SRC-3). The invention is useful for inhibiting the expression of SRC-3 in human cells or tissues in vitro. It is useful for diagnostics, therapeutics, prophylaxis and as research reagents and kits. It is useful prophylactically, to prevent or delay infection, inflammation or tumor
The invention provides isolated Toxoplasma gondii nucleic acids that encode immunogenic polypeptides. The T. gondii nucleic acid molecule immunogenic proteins and antibodies to the proteins can be used to inhibit T. gondii occyst shedding in a cat due to infection with T.
                                                                                                                       WPI; 1999-418930/35

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Query Match
                                         The invention relates to detection of parasite oocysts or cysts in a faeces sample comprising contacting the sample with a solid support, drying and then washing the sample with an aqueous wash solution, addir an aqueous elution solution and eluting DNA from the sample by heating and amplifying by PCR oocyst/cyst-specific DNA and detecting parasite amplification products. The method is useful for detecting parasite ocysts e.g., enteric apicomplexa oocysts such as Cryptosporidium oocysts. The method is also useful for developing vaccines to prevent cysts. The method is also useful for developing vaccines to prevent ocytts shedding in cats. The present sequence is a PCR primer used to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    gondii. They can be used for preventing T. gondii infection and for preventing the spread of T. gondii infection. They can also be used for preventing T. gondii infection. They can also be used for detecting T. gondii infection. The detection method can be used to detect parasite cysts or occysts in feces, e.g. from enteric apicomplexa occysts such as Cryptosporidium occysts and Toxoplasma occysts. Sequences AAX91276-395 primers used in RT-PCR analysis of nucleic acid sequences encoding immunogenic T. gondii proteins
                                                                                                                                                                                                                                                                Detecting parasite oocysts or cysts in feces, comprises eluting DNA from sample into aqueous solution by heating, amplifying DNA with primers specific for oocysts or cysts being detected, and detecting amplification

The protein is useful for inhibit occyst shedding by cats infected with Toxoplasma gondii. The protein is useful for preventing or ameliorating diseases caused by infection with T. gondii. The nucleic acid can be used as genetic vaccine which encodes the protein. The protein and the nucleic acid are used as diagnostic respents for detection of T. gondii infection. The present sequence is used in the exemplification of the

Specifically claimed are antisense oligonuclectides capable of modulating the expression of GFAT, and which comprise any of the 3063 sequences of 20 base pairs, given in the specification. The compound, composition and methods are useful for treating a disease or condition associated with GFAT, such as a disease or condition, e.g. diabetes, a cardiovascular or neurological disorder, ischemia/reperfusion injury. They are also useful in research and diagnostics for modulating the expression of GFAT. The present sequence represents a chimeric phosphorothicate oligonucleotide with 2'.MGE wings and a deoxy gap, these

CC disease, particularly coronary artery disease, but also cerebrovascular CC disease, coronary restenosis, and peripheral vascular disease. CC Conversely, a high level of HDL has protective effects against CC cardiovascular disease. The invention provides genetic constructs and transgenic cells and non-human animals comprising human ABC1 nucleic cardiovascular disease comprising the administration of an expression of CC cardiovascular disease comprising the administration of an expression cc vector encoding ABC1 or an active fragment thereof. The invention also encompasses compounds which minic ABC1 activity, compounds which cc stimulate ABC1 expression and methods of screening for such compounds. It further relates to methods for determining whether a patient has an CC increased risk for cardiovascular disease due to polymorphisms in the CC area of the forman ABC1 proteins and nucleotides can be used to treat or prevent cardiovascular disease, especially coronary artery disease, coronary artery disease, associated CC with ABC1 biological activity, such as Alzheimer's disease, Niemann-Pick CC disease. They may also be used in the treatment of disease seconiar activity, such as Alzheimer's disease, Niemann-Pick CC disease. They may also be used in the treatment of disease associated CC with ABC1 biological activity, such as Alzheimer's disease, Niemann-Pick CC disease. The ABC1 because acceptance of Cansank Accession No. CAN10005. and X75026. and the nucleic company and cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               (B38082) and to nucleic acid sequences (C69120) which encode it. ABC1 is a member of the ATP-binding cassette (ABC transporter) superfamily of proteins, and plays a crucial role in cholesterol transport, particularly intracellular cholesterol trafficking in monocytes and fibroblasts, being involved in cholesterol trafficking in monocytes and fibroblasts, being located on chromosome 931, and mutations in this gene encoding ABC1 is located on chromosome 931, and mutations in this gene are associated with two genetic HDL (high density lipoprotein) deficiency disorders. Tangier disease (TD) and familial HDL deficiency (FHA). These diseases are distinguishable in that TD is an autosomal recessive disorder, while FHA is inherited as an autosomal dominant trait. Low levels of HDL ("good cholesterol") in the blood correlate with a high risk of cardiovascular disease, particularly coronary artery disease, but also cerebrovascular disease.
                                               sequences of GenBank Accession No: CAA10005.1 and X75926, and the nucleic acid with the exact sequence as GenBank Accession No: AJ012376.1. The present sequence represents a polymorphic site of the human ABC1 gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to the human ABC1 cholesterol transporter protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Example; Fig 11; 229pp; English
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New ABC1 polypeptide is useful for treating diseases associated with ABC1 biological activity, e.g. Alzheimer's disease, Huntington's disease and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New ABC1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         WPI; 2000-587528/55

                                                                                     Query Match
                                                                                                                                                                                                                DNA sequences AAH62100 - AAH62688 represent segments of human genes which contain single nucleotide polymorphisms (SNPs). A method is included in the invention for analysing a nucleic acid sample, which consists of determining the base occupying any one of the polymorphic sites given in the SNP containing sequences. The nucleotide sequences can be used in the diagnosis or monitoring of diseases, such as cancer, inflammation, heart diseases of the cardiovascular system, and infection by microorganisms. The oligonucleotides are also useful in the manufacture of a medicament for the treatment or prophylaxis of the diseases, and as a pharmaceutical. SNP containing oligonucleotides are useful in applications such as phenotype correlation, forensics, paternity testing, medicine and genetic analysis
                                                                                                                                    Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New nucleic acid segments of the human genome, particularly from genes including polymorphic sites, for phenotype correlation, forensics, paternity testing, medicine and genetic analysis.
                                                                                                                                                                                Revised

                                                                                                                                                                                                                                                                         The invention relates to a chemically synthesized double stranded short interfering nucleic acid (siNA) molecule (I) that directs cleavage of a county of the through RNA interference (RNAi), where one strand of the siNA molecule comprises nucleotide sequence having sufficient complementarity to the c-JUN RNA for the siNA molecule to direct cleavage of the c-JUN RNA through RNA interference. (I) is useful for inhibiting mitogen activated protein kinase gene (e.g., c-JUN, JNK1, JNK2, p38, ERK1 or ERK2) expression associated with diseases e.g., inflammatory disease, autoimmune disease, allergy, cancer. (I) exhibits improved RNA interference activity and nuclease resistance. The present sequence represents a human MAP kinase 8/JNK1 modified siRNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                          Novel short interfering nucleic acid molecule useful for inhibiting mitogen activated protein kinase gene expression e.g., c-UUN associated with diseases e.g., inflammatory disease or autoimmune disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      RNA interference; mitogen activated protein kinase inhibitor; inflammation; immunosuppressive; immune disorder; autoimmune di allergy; antialnergic; cytostatic; neoplasm; cancer; ss; siRNA; gene silencing; small interfering RNA; MAP kinase inhibitor.

Considerable to a polymicide control a recombinant control particle relates to a polymicide comprising an organelle and/or chloroplast localization also relates to a comparish particle comprising an bacteriophage, a method of transfecting careful comprising a bacteriophage, a method of transfecting careful comprising a bacteriophage, a method of transfecting careful comprising a protein transduction domain and an organelle comprising contacting the cell with a vector operably linked to a collypeptide having a protein transduction domain and an organelle careful carefu The invention relates to a polynucleotide encoding a

Mitochondrial polymerase PolG target DNA #59

dehydrogenase deficiency, Alzheimers disease, Parkinsons disease, diabetes, aging and heart disease. This sequence represents mitochondrial polymerase PolG target DNA used in the scope of the invention.

polypeptide comprising an organelle and/or chloroplast localization algunal and a protein transduction domain. The invention also relates to a recombinant viral vector comprising the polynucleotide, a cell comprising a modified organelle comprising a bacteriophage, a method of transfecting a cell comprising contacting the cell with a vector operably linked to a polypeptide having a protein transduction domain and an organelle comprising transfecting the cell with a recombinant lambdaphage, the recombinant lambdaphage comprising a polynucleotide encoding an organelle comprising lambdaphage comprising a polynucleotide encoding an organelle protein, where the organelle localization signal operably linked to a bacteriophage lambda surface protein, where the organelle localization signal is displayed on a surface of the recombinant lambdaphage and directs the recombinant lambdaphage to the organelle, and where the recombinant lambdaphage introduces a polynucleotide into the organelle, a composition comprising
                                                                                                                                                                                                                                                                                                                                                        New polynucleotide encoding a polypeptide having an organelle or chloroplast localization signal, and a protein transduction domain, useful for treating diseases with defective mitochondrial function.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      retinitis pigmentosa; pyruvate dehydrogenase deficiency;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    cc nucleic acid molecule (siNA) capable of reducing expression of a target compressed active in a IgE-mediated disorder, a genetic construct that cexpresses the siNA, and a binding agent that specifically binds to a cc target antigen expressed on the surface of the cell. Also described are: ce method for the treatment of an IgE-mediated disorder in a patient; cc prevention of IgE-mediated disorder in a patient; cc eosinophilia in a patient; modulating an IgE-mediated immune response to ca specific antigen in a patient; and preventing or reducing the severity co f an immune response to a specific antigen in a patient; and preventing or reducing the severity cc is useful in the preparation of a medicament useful for the treatment of cc urticaria, atopic dermatitis, food allergies, diseases that benefit from the reduction of eosinophilia in the tissues of the respiratory system, cc or disorders having hypersensitivity immune reaction. This sequence cc represents a siNA for supression of human IgE expression.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ક

The present sequence was used in the development of a novel method for classifying patients suffering from an inflammatory disease. The method comprises identifying in DNA from at least 1 patient a sequence polymorphism, as compared with the normal 5-lipoxygenase (5-LOX) gene (AAT88431), in a 5-LOX regulatory gene sequence. The method can be applied to subjects with asthma, ulcerative colitis, bronchitis, sinusitis, psoriasis, allergic and non-allergic rhinitis, lupus or rheumatoid arthritis. Specifically it can be used to diagnose asthma or susceptibility to disease, identify treatments suitable for individual

AC ADJ95
AC This invention relates to a novel method of assessing the virulence of a herpesvirus isolate, for example Equine herpesvirus type 1 (EHV-1) or type 4 (EHV-4), which comprises using a genetic marker, especially an ORF30-ml region marker. The invention may be useful for the production of compounds with a virucide activity or for the development of a vaccine. The method, kit and sequence of the EHV-1 strain V592 polymerase ORF30-ml region are useful for assessing the virulence of a herpesvirus or neurovirulence. The vaccine is useful for immunising a host against a herpesvirus disease and for treating disease. The present sequence is that of a PCR primer which was used in the exemplification of the invention.

                                                            The invention relates to a new nucleotide sequence which comprises: a CC first nucleic acid sequence encoding a signal peptide that localizes a CC protein of interest fused to the signal peptide to an endoplasmic CC reticulum-derived protein body within a cell; a second nucleic acid sequence encoding the protein of interest; and a regulatory element CC sequence encoding the protein of interest; and a regulatory element CC than one of the first nucleic acid, the second nucleic acid and the CC regulatory element, is heterologous with respect to one or more than one of first nucleic acid, the second nucleic acid and the regulatory CC element. Also described are: a nucleotide sequence comprising, a gamma-cc zein regulatory element operatively linked with a nucleic acid sequence ce encoding a gamma-zein signal peptide fused to a heterologous protein of interest, and a gamma-zein 3' UTR operatively linked to the nucleic acid sequence; a plant comprising the nucleotide sequence; a plant comprising the protein of interest; and an cxpression construct comprising the protein of interest; and an expression construct comprising the following operatively linked elements CC protein of lanterest comprising the following operatively linked elements cut to the nucleotide sequence is useful for producing cut transcenic plants and seeds having heterologous protein. Such as gamma-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Matches

                      This invention relates to a novel nucleic acid that encodes the polycystic kidney and hepatic disease | (PRHD1) polypeptide. It has been identified that a mutation in the PKHD1 gene is associated with autosomal recessive polycystic kidney disease (ARPKD), which is characterised by enlarged kidneys and congenital hepatic fibrosis, and is most commonly observed in children and infants. The present invention describes the identification of the PKHD1 gene, mapped to human chromosome 6p21.1-p12, and splice variants thereof. The PKHD1 polynucleotides and polypeptides are useful in diagnostic testing and for developing targeted therapeutic interventions for patients with ARPKD. Furthermore, they exhibit proliferation, cellular adhesion and repulsion. This oligonucleotide sequence is a PCR primer used to amplify human PKHD1 exons for mutation analysis, in an exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                Germino

                                                                                                                                                                                                           The present invention relates to a compound which specifically hybridizes with a nucleic acid molecule encoding GFAT, and inhibits the expression of GFAT, Specifically claimed are antisense oligonucleotides capable of modulating the expression of GFAT, and which comprise any of the 3063 sequences of 20 base pairs, given in the specification. The compound, composition and methods are useful for treating a disease or condition associated with GFAT, such as a disease or condition, e.g. diabetes, a cardiovascular or neurological disorder, ischemia/reperfusion injury. They are also useful in research and diagnostics for modulating the expression of GFAT. The present sequence represents a chimeric phosphorothicate oligonucleotide with 2'-MOE wings and a deoxy gap, these oligonucleotides inhibit human GFAT expression.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New compounds, particularly antisense oligonucleotides targeted to a nucleic acid encoding glutamine-fructose-6-phosphate amidotransferase (GFAT), for treating diabetes, a cardiovascular or neurologic disorder
                                                                                                                                                              Sequence

                                                                                                                        The present invention relates to a compound which specifically hybridizes with a nucleic acid molecule encoding GPAT, and inhibits the expression of GFAT. Specifically claimed are antisense oligonucleotides capable of modulating the expression of GFAT, and which comprise any of the 3063 sequences of 20 base pairs, given in the specification. The compound, composition and methods are useful for treating a disease or condition associated with GFAT, such as a disease or condition, e.g. diabetes, a cardiovascular or neurological disorder, ischemia/reperfusion injury. They are also useful in research and diagnostics for modulating the expression of GFAT. The present sequence represents a chimeric phosphorothioate oligonucleotide with 2'-MOE wings and a deoxy gap, these oligonucleotides inhibit human GFAT expression.
                                                                                                                                                                                                                                                                                                                         New compounds, particularly antisense oligonucleotides targete nucleic acid encoding glutamine-fructose-6-phosphate amidotrar (GFAT), for treating diabetes, a cardiovascular or neurologic ischemia/reperfusion injury.
                                                                                                    Sequence
                                                                                                                                                                                                                                                                                                 Claim 4; SEQ ID NO 2738; 175pp;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to compounds, compositions and methods for modulating the expression of MD-1 RP105-associated (also called as and MD1) DNA. The composition comprise antisense oligonucleotides and mD1) DNA. The composition comprise and modulating to the composition of the composition of the composition of the compound is useful for targeted to MD-1 RP105-associated DNA. The compound is useful for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Example 15;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New oligonucleotide compound that inhibits expression of MD-1 RP105-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                WPI; 2004-440335/41
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                09-DEC-2002; 2002US-00316242
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   09-DEC-2002;

Also described: (1) a gene (II) encoding (I); (2) a recombinant vector (III) containing (II); (3) a transformed host (IV) comprising (II) or (III); and (4) producing (I), using (IV). (I) is useful for combining a saccharide with a substrate, which involves used in manufacturing pharmaceuticals, food additive or as industrial raw material. (I) has high substrate specificity. The present sequence represents a PCR primer for a Solanum glycosylase protein, which is used in the exemplification of the present invention.

The invention relates to a novel compound 8-80 nucleotides in length targeted to a nucleic acid molecule encoding phosphodiesterase 4B, where the compound specifically hybridizes with the nucleic acid molecule encoding phosphodiesterase 4B (ADZ46976) and inhibits the expression of phosphodiesterase 4B. A compound of the invention has immunosuppressive activity. The compound is useful for modulating the expression of phosphodiesterase 4B. It is useful for modulating the expression of phosphodiesterase 4B. It is useful for diagnosing or treating diseases associated with expression of phosphodiesterase 4B, including autoimmune disease. The present sequence is used in the exemplification of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                               New compound 8-80 nucleobases in length targeted to a nucleic acid molecule encoding phosphodiesterase 4B, useful for diagnosing or treating diseases associated with expression of phosphodiesterase 4B, e.g.

pouring a solution containing percutaneous drug is assayed subcutaneous tissue side and epidermal side, injecting polyhydric alcol containing solution into the epidermal side, and measuring the degree permeability mediated by a dermal transporter. Also described is a methodo of screening for an inhibitory substance, which involves performing comparative evaluation showing the extent of skin
